1. When taken in doses of more than 10 times the recommended daily ----, vitamins A and D are toxic.

- A) maintenance B) exposure
C) application D) advice
E) allowance

2. Many people with a regular exercise programme accept minor injuries and soreness as an almost ---- component of their programme.

- A) irrelevant B) available
C) inevitable D) expansive
E) irreversible

3. Despite a preoccupation with body image and weight loss, the prevalence of obesity in the US continues to rise ----.

- A) collectively B) adequately
C) randomly D) respectively
E) dramatically

4. The goal of the Neuroscience Research Programme is to ---- our understanding of the neuronal systems involved in a variety of neurological disorders.

- A) rank B) relate
C) implicate D) increase
E) interact

5. The body resists starvation by ---- its own tissues and using them as a source of calories – much like burning the furniture to keep the house warm.

- A) getting off B) breaking down
C) carrying out D) following up
E) making for

6. Billions of useful bacteria colonize our guts, but because antibiotics are lethal to a whole range of microbes, drugs taken for a chest infection, for example, ---- friendly bacteria too.

- A) wipe out B) sort out
C) build up D) take back
E) move in

7. Prevention is the ideal way to approach pain, and several educational programmes that ---- workers to avoid lower back injuries ---- some effectiveness.

- A) are training / would show
B) would train / had shown
C) have trained / showed
D) train / have shown
E) trained / will show

8. **Psychologists, psychiatrists and neuroscientists ---- for years over how much of our behaviour ---- driven by our genes versus the environment in which we grow up and live.**
- A) had argued / had been
B) used to argue / would be
C) have argued / is
D) argue / would have been
E) argued / will be
9. **For a long time, scientists believed that functional deficits in certain brain regions ---- autism – the result of complications in brain structure that no change in wiring among neural networks ----.**
- A) might cause / had fixed
B) caused / could fix
C) have caused / fixes
D) cause / could have fixed
E) would have caused / fixed
10. **Epidemiology, which ---- as a science until the 19th century, is a branch of medicine that investigates factors ---- to improved health, or the occurrence of a disease in a particular population.**
- A) could not have evolved / having contributed
B) had not evolved / to contribute
C) has not evolved / to have contributed
D) did not evolve / contributing
E) could not evolve / to be contributing
11. **Although 25 to 30 per cent of all people ---- some form of excessive mood disturbance during their lifetime, only about 10 per cent ---- a disorder severe enough to require medical attention.**
- A) would experience / have had
B) experienced / will have had
C) had experienced / had had
D) will have experienced / would have
E) experience / have
12. **In biofeedback, biological responses are measured ---- electronic instruments, and the status of those responses is immediately available ---- the person being tested.**
- A) with / at B) by / to C) in / about
D) from / on E) through / with
13. **Perhaps the most crucial factor ---- patient non-compliance is poor verbal communication ---- the practitioner and the patient.**
- A) for / by B) of / among C) about / of
D) in / between E) to / for
14. **---- physical activity can enhance physical functioning, reduce anxiety, stress, and depression, it also poses some hazards to one's physical and psychological health.**
- A) Although B) Since
C) Whether D) In case
E) Unless

15. ---- surgeons in France had performed the first partial face transplant late in November, psychologists began to question whether the patient was mentally stable enough to handle the stressful, high-risk procedure.

- A) Suppose that B) So long as
C) As soon as D) Because
E) If

16. ---- people have been diagnosed with cardiovascular disease (CVD), they typically enter a cardiac rehabilitation programme to change their lifestyle and thereby avoid subsequent CVD.

- A) Whereas B) After
C) While D) Even though
E) As if

17. In veterinary medicine, federal governments and professional associations keep data on animal euthanasia and, ---- the research results obtained so far, have developed guidelines and procedures.

- A) in the hope of B) as of
C) in case of D) in accordance with
E) on behalf of

18. The anaemia of folate deficiency, ---- DNA synthesis slows and the body's cells lose their ability to divide, is characterized by large, immature blood cells.

- A) in which B) for whom
C) how D) in that
E) why

19. – 23. sorularda, aşağıdaki parçada numaralanmış yerlere uygun düşen sözcük ya da ifadeyi bulunuz.

People may bruise easily because of fragile capillaries in the skin. Each time these small blood vessels break, a little blood (19) ----, leaving tiny red dots in the skin and bluish-purple bruises. Women seem more prone than men to bruising from a minor injury, especially (20) ---- the thighs, buttocks, and upper arms. Older people are especially susceptible to bruising after bumps and falls (21) ---- they have fragile blood vessels and a thinner layer of fat under the skin, which normally serves as a cushion to help protect against injury. For most people, the condition isn't serious, but bruising easily (22) ---- a sign that something is wrong with the blood clotting elements, most likely the platelets. Blood tests can determine if (23) ---- problems exist.

19.

- A) passes by B) comes up C) runs away
D) breaks off E) leaks out

20.

- A) on B) with C) throughout
D) through E) over

21.

- A) unless B) even so C) because
D) whereas E) so that

22.

- A) has to be B) should be C) would be

24. Even after a drug has been approved by the Food and Drug Administration (FDA), ----.

- A) such drugs are occasionally studied first in a small number of healthy volunteers
- B) comprehensive premarketing studies detected adverse reactions about once in every 1,000 doses
- C) many drugs are rejected at this stage, too
- D) the manufacturer must conduct postmarketing surveillance and report any previously undetected adverse drug reactions
- E) it was 3 years before the drug came onto the market

25. Because symptoms of sleep apnea occur during sleep, ----.

- A) severe apnea can result in headaches, excessive daytime sleepiness and slow mental activity
- B) they must be described by someone who observes the person sleeping
- C) snoring is associated with episodes of gasping and choking
- D) most people have been treated successfully and can now sleep comfortably
- E) people who snore are advised to sleep on their side or face-down

26. Even when a cell becomes cancerous, ----.

- A) antigens released into the bloodstream by some cancers are sometimes called tumour markers
- B) it is a cell whose biological function has been altered
- C) a fully functioning immune system can't always destroy all these cancer cells
- D) the immune system may regard these cells as foreign
- E) the immune system can often destroy it before it replicates

27. While some drugs, once absorbed, tend to stay within the watery tissues of the blood and muscle, ----.

- A) others concentrate in specific tissues such as the liver and kidneys
- B) drugs penetrate different tissues at different speeds
- C) all drugs are either metabolized or excreted intact
- D) these drugs accumulate in the fatty tissues
- E) they rapidly circulate through the body

28. Armed with gene sequences and the latest gene chip technologies to measure the activity of thousands of genes simultaneously, ----.

- A) high-risk groups can be targeted with more aggressive screening programmes
- B) antibody-based therapies have an inherent limitation
- C) the tissue that surrounds a tumour plays a crucial role in its development
- D) anti-cancer drugs have been largely a matter of dosing people and waiting to see what happens
- E) researchers are now several years into the task of mapping which ones grow abnormally

29. Although the cause of Reye's syndrome is unknown, ----.

- A) most doctors are unaware of its effects
- B) people who take aspirin have an increased risk of bleeding
- C) certain viruses, such as influenza A or B or varicella virus, may be involved
- D) the doctor would perform a liver biopsy and spinal tap to diagnose it
- E) no specific treatment can be proposed to prevent it

30. According to recent studies, bananas are the most promising food for an edible vaccine against the hepatitis B virus, ----.
- A) but this virus is very common in many African countries
 - B) so that potatoes, tomatoes and other vegetables might serve to immunize people some day
 - C) just as symptoms of acute viral hepatitis usually begin suddenly
 - D) which lives in about 5 per cent of the world's population
 - E) whereas scientists have discovered a way to boost the level of immune-triggering hepatitis protein in the fruit
31. Cancer cells are often perceived as all having the same potential to proliferate and spread within the body, ----.
- A) because cancer treatments must target cancer stem cells to eradicate the disease
 - B) but in many types of cancer, only a small subset of tumour cells has that power
 - C) where the study of stem cells is shedding light on cancer treatments today
 - D) so one among thousands of tumour cells may be a cancer stem cell responsible for driving the disease
 - E) since current treatments focus on killing the greatest number of cancer cells
32. Audiometry measures hearing loss precisely with an electronic device ----.
- A) that produces sounds at specific pitches and specific volumes
 - B) if a person listens to a series of two-syllable, equally accented words presented at specific volumes
 - C) although it measures how loudly words have to be spoken to be understood
 - D) because loud tones presented to one ear may also be heard by the other ear
 - E) even if it detects how much sound passes through the middle ear
33. For any pain syndrome, surgery is the most extreme approach and is usually recommended ----.
- A) because it has its own potential dangers and possibilities for complications
 - B) in case the pain starts suddenly and stays in a particular area of the back
 - C) only when all the other means of treatment have failed to produce a positive result
 - D) unless back surgery is only partially successful in repairing tissue damage
 - E) as long as drugs, skin stimulation and surgery can all be effective for controlling pain
34. *Bulimia nervosa* occurs with equal prevalence in various social classes and ethnic groups, ----.
- A) while people who have this disease are distressed by it
 - B) but both eating disorders occur far more often in women than men
 - C) even though *anorexia nervosa* has a mortality rate of 5% to 10%
 - D) since an antidepressant drug can often help control the disease
 - E) whereas *anorexia nervosa* appears primarily among the upper classes
35. People with extensive burns have an increased risk of infection ----.
- A) so that a new layer of epidermis grows slowly from the edges of the burned area
 - B) whereas many people who have been burned need to take an analgesic, often a narcotic, for at least a few days
 - C) although damaged red blood cells in the injured area may make the burn bright red
 - D) because the damaged skin opens up the body to invasion by harmful organisms
 - E) but life-threatening burns require immediate care, preferably at a hospital equipped to treat burns

36. – 38. sorularda, verilen İngilizce cümleye anlamca en yakın Türkçe cümleyi bulunuz.

36. **Most infectious diseases are caused by microorganisms that invade the body and multiply there.**

- A) Pek çok bulaşıcı hastalığın nedeni vücuda yayılan ve vücutta üreyen mikroorganizmalardır.
- B) Mikroorganizmalar, vücuda girerek ve vücutta çoğalarak, çeşitli bulaşıcı hastalıkların oluşmasına yol açar.
- C) Çoğu bulaşıcı hastalık, vücudu işgal eden ve vücutta çoğalan mikroorganizmalar nedeniyle oluşur.
- D) Bulaşıcı hastalıkların nedenlerinin çoğu, vücuda girerek çoğalan mikroorganizmalarla ilgilidir.
- E) Üreyip vücudu ele geçiren mikroorganizmalar nedeniyle birçok bulaşıcı hastalık ortaya çıkmaktadır.

37. **The severity of a burn depends on the amount of tissue affected and the depth of the injury, which is described as first, second, or third degree.**

- A) Bir yanığın şiddeti, etkilenen doku miktarına ve hasarın birinci, ikinci veya üçüncü derece olarak tanımlanan derinliğine bağlıdır.
- B) Etkilenen dokuların durumu ve oluşan hasarın derinliği, yanığın birinci, ikinci veya üçüncü derece olarak belirtilen şiddetini ortaya koyar.
- C) Bir yanığın birinci, ikinci veya üçüncü derece olarak sınıflandırılan hasar derinliği ile zarar görmüş doku miktarına dayanılarak o yanığın şiddeti belirlenir.
- D) Bir yanığın şiddetinin birinci, ikinci veya üçüncü derece olarak tanımlanması, zarar gören doku miktarıyla ve ortaya çıkan hasarın derinliğiyle ilişkilidir.
- E) Birinci, ikinci veya üçüncü derece olarak adlandırılan hasar derinliği ve zarar gören dokuların çokluğu göz önüne alınarak bir yanığın şiddeti saptanabilir.

38. **Because much is still unknown about breast cancer and no single treatment works all the time, doctors may have different opinions about the most appropriate treatment.**

- A) Göğüs kanseri için her zaman sonuç veren tek bir tedavi yönteminin bulunmamasının yanı sıra hastalıkla ilgili yeterli bilginin olmaması nedeniyle hekimler arasında en etkili tedaviye ilişkin farklı görüşler mevcuttur.
- B) Göğüs kanserine ilişkin çok az şey ortaya konduğu ve her zaman sonuç veren belirli bir tedavi yöntemi bulunmadığı için, hekimler en geçerli tedavi hakkında farklı düşünceler ileri sürmektedir.
- C) Hekimler göğüs kanseri için en uygun tedavi hakkında çeşitli görüşler ileri sürmektedir; çünkü, bu hastalık hakkında yeterli bilginin olmaması, tek bir tedavinin her zaman geçerli kılınmasını engellemektedir.
- D) Göğüs kanseri hakkında yeterli bilgi olmadığı için her zaman sonuç veren tek bir tedavi yöntemi yoktur ve bu nedenle hekimler en uygun tedaviye ilişkin çelişkili düşünceler ortaya atmaktadır.
- E) Göğüs kanseri hakkında çok şey hâlâ bilinmediğinden ve hiçbir tedavi tek başına her zaman sonuç vermediğinden, hekimler, en uygun tedaviye ilişkin farklı görüşlere sahip olabilirler.

39. – 41. sorularda, verilen Türkçe cümleye anlamca en yakın İngilizce cümleyi bulunuz.

39. Yoksul ülkelerdeki çoğu insan, sıtma, AIDS, ve-rem ile zengin ülkelerde daha az bilinen birçok hastalık çekmektedir; çünkü, hükümetleri, ilaç şirketlerinin istediği fiyatları karşılayamamaktadır.
- A) Malaria, AIDS, tuberculosis and a number of other diseases not known in rich countries affect many people in poor countries, where the governments are reluctant to pay the prices companies demand for drugs.
- B) Most people in poor countries suffer from malaria, AIDS, tuberculosis and many diseases lesser known in rich countries, since their governments cannot afford the prices drug companies want.
- C) Since malaria, AIDS, tuberculosis and various other diseases little-known in rich countries are very common among the people of poor countries, the governments find it hard to pay the prices demanded by companies for drugs.
- D) While a growing number of people in poor countries suffer from malaria, AIDS, tuberculosis and several other diseases unknown in rich countries, their governments refuse to pay the prices companies ask for their drugs.
- E) The governments in poor countries cannot afford to pay the prices companies want for their drugs, but more and more people are being affected by malaria, AIDS, tuberculosis and other diseases that do not occur in rich countries.

40. İnsan vücudu, her biri, yaşamı sürdürmek için gerekli olan bir işlevi yerine getiren ayrı ayrı organ ve dokulardan oluşmuş son derece karmaşık bir sistemdir.

- A) The human body is a highly complex system made up of separate organs and tissues, each performing a function essential to maintaining life.
- B) Since the human body consists of many different organs and tissues, each of which has a function essential for the maintenance of life, it is to be compared to an extremely complex system.
- C) The human body, which is an extremely complex system, is made up of innumerable organs and tissues which have separate functions essential for the maintenance of life.
- D) The presence of many different organs and tissues, each of which performs a function necessary for maintaining life, makes the human body a very complicated system.
- E) The human body is so complicated a system that each of the organs and tissues it consists of performs a function vital for maintaining life.

41. Tümör büyümesine neden olan kanser kök hücrelerinin varlığı, çeşitli kan kanseri ve tümör türlerinde tespit edilmiştir; ancak, bu habis kök hücrelerinin nasıl oluştuğu hâlâ belirsizdir.

- A) It has been shown that a wide range of blood cancer and tumour types result from malignant stem cells whose properties are not yet fully known.
- B) Cancer stem cells that cause tumour growth have been discovered in a number of blood cancer and tumour types, but it is not yet clear why they become malignant.
- C) Different blood cancer and tumour types are caused by cancer stem cells, although there is no evidence to show how these malignant stem cells come into being and drive tumour growth.
- D) Even though it is not yet certain how malignant stem cells form, they are often found in various blood cancer and tumour types, causing them to grow.
- E) The existence of cancer stem cells that drive tumour growth, has been established in several blood cancer and tumour types, but how these malignant stem cells arise is still uncertain.

42. As anyone who has sat through a lecture on a warm day knows, attentiveness and mental alertness can be hard to sustain. ----. Its counterpart is sleep, a state in which we continue to receive stimuli but are not conscious of them.

- A) It is also important to regulate sleep
- B) Researchers can study the electrical activity in the brain during arousal and sleep
- C) It filters out some familiar and repetitive information that constantly enters the nervous system
- D) Arousal is a state of awareness of the outside world
- E) In general, the less mental activity that takes place, the more regular are the brain waves recorded on the electroencephalogram (EEG)

43. Most people are familiar with one important function of the kidneys – to rid the body of waste materials that are either ingested or produced by metabolism. A second function that is especially critical is to control the volume and composition of the body fluids. For water and virtually all electrolytes in the body, the balance between intake and output is maintained in large part by the kidneys. ----.

- A) Each kidney in the human body is made up of about 1 million *nephrons*, each capable of forming urine
- B) This regulatory function of the kidneys maintains the stable environment of the cells necessary for them to perform their various activities
- C) Blood flow to the two kidneys is normally 21 per cent of the cardiac output, or about 1,200ml/min
- D) The two kidneys lie on the posterior wall of the abdomen, outside the peritoneal cavity
- E) These include urea, uric acid, creatinine and metabolites of various hormones

44. In 1862, the English doctor John Langdon Down, who was the director of a home for mentally handicapped children, described the case of one of the children, who was short and had stubby fingers and unusual eyelids. The boy's condition was later labelled by this doctor's surname. ----. In 1959, the French paediatrician Jérôme Lejeune discovered that these children have three copies of chromosome 21, instead of two.

- A) Physical limitations continue to challenge these individuals
- B) Today, more than 350,000 Americans have Down's syndrome
- C) But the cause of Down's syndrome was not uncovered for another century
- D) Scientists confirmed that within this chromosome are the genes that cause both Down's syndrome and Alzheimer's disease
- E) In 2004, American scientists tracked the effects of other genes on chromosome 21

45. In the 1990s, most psychiatrists in the US started to treat children and teens with antidepressants designed for adults, since they wanted something more for them than talk therapy. ----. Now, however, studies have found that some antidepressants might interfere with normal patterns of growth in children's still developing brains.

- A) Although these drugs had not been tested in the young brains of children, they hoped the benefits would outweigh the risks
- B) Several brain areas are commonly associated with depression such as those involved in mood, sleep, appetite, desire and memory
- C) Finding these effects in mice is a long way from proving that the same thing happens in humans
- D) Adults with depression usually recognize that they have a problem and they want to fix it, but children rarely ask to see a psychiatrist
- E) Concerns over antidepressant use led the FDA to issue a warning label for these medications

46. **Ulcerative colitis is a disease in which extensive areas of the walls of the large intestine become inflamed and ulcerated. Some clinicians believe that it results from an allergic or immune destructive effect, but it could also result from a chronic bacterial infection. ----.**
- A) The person may also have a fever and a poor appetite
 - B) Even then, the ulcers sometimes fail to heal, and the only solution is removal of the entire colon
 - C) Moreover, about 10 per cent of people who have the disease have only simple attacks
 - D) Whatever the cause, there is a strong hereditary tendency for susceptibility to this disease
 - E) Unlike Crohn's disease, ulcerative colitis never affects the small intestine

47. – 51. sorularda, karşılıklı konuşmanın boş bırakılan kısmını tamamlayabilecek ifadeyi bulunuz.

47. Patient :
- **Dr Jameson, what are the safest exercises for me, as a middle-aged man, to improve my fitness?**
- Dr Jameson :
- **There are several. Let me think which would be suitable for you.**
- Patient :
- ----
- Dr Jameson :
- **Those would be fine. Cycling can also be useful.**
- A) It will take time to make a decision, won't it? I'll call you to learn your recommendations.
 - B) I would prefer walking and swimming. Forget the rest.
 - C) At my age, would aerobics really be suitable?
 - D) Let it be something natural: no exercising machines for me!
 - E) I have to climb three flights of stairs to get to my home. Isn't that enough exercise?

48. Eleanor :
- **This article is about patients in a persistent vegetative state. Some of them wake up many years later, and some of them never do.**
- Bob :
- **How do doctors decide whether or not these patients should be kept on life-support?**
- Eleanor :
- ----
- Bob :
- **I suppose so. Obviously there are legal and medical concerns, but I think the family of the patient should have some rights in the matter, too.**
- A) Sometimes a patient's brain works around the damaged part, allowing the patient to begin to function normally again.
 - B) One patient in a minimally conscious state started to speak and move about 19 years after he'd been injured.
 - C) I don't know how; but they do have to come to a decision.
 - D) It is difficult for doctors to make accurate diagnoses of unconscious patients.
 - E) A patient shows sensory responses to pain, even when the nervous system isn't connected to the centres of the brain that cause it to experience it.

49. Senior Doctor :
- **I hear you've been doing research on alcoholism in Turkey.**
- Junior Doctor :
- **Yes. I feel the findings are not all that alarming.**
- Senior Doctor :
- ----
- Junior Doctor :
- **In a way, yes. For instance, nearly 8 per cent of adults in the US have a serious problem with alcohol use.**
- A) Really? You say that in comparison with other developed countries?
- B) Aren't they? It's a fact that alcohol produces both psychological and physical dependence.
- C) In your report, you claim that men are four times more likely than women to become alcoholics.
- D) In general, alcoholics often can't manage their behaviour and tend to drive while drunk.
- E) Well, alcohol is rapidly absorbed from the small intestine into the blood stream.

50. Dr Clark :
- **Let me stress that the most troublesome problem of peritoneal dialysis is the risk of infection.**
- Student :
- **We can use antibiotics to clear up the infection.**
- Dr Clark :
- ----
- Student :
- **So it's inevitable that in peritoneal dialysis, complications can occur any time.**
- A) Generally, peritoneal dialysis is not performed in people who have abdominal wall infections.
- B) Yet that's not all. Other problems are also associated with this type of dialysis.
- C) In peritoneal dialysis, a catheter is inserted through a small incision in the abdominal wall into the peritoneal space.
- D) Moreover, inflammation of the kidneys can also be caused by an infection.
- E) In fact, when the kidneys fail, waste products and excess water can be removed from the blood by haemodialysis.

51. Jerome :
- **Did you see the documentary on TV about the US healthcare system?**
- Mark :
- ----
- Jerome :
- **That's right, many families have gone bankrupt paying for treatment for a family member.**
- Mark :
- **Yes, and that's not all. Some patients have even been refused treatment by hospitals.**
- A) Yes; to tell the truth, I was hoping that it would be more thorough.
- B) Yes, but I didn't have time to watch all of it.
- C) No, but I wanted to watch it. Did you?
- D) Yes. It's getting worse and worse.
- E) No; I watched a film on another channel instead. Was it very informative?

52. – 56. sorularda, cümleler sırasıyla okunduğunda parçanın anlam bütünlüğünü bozan cümleyi bulunuz.

52. (I) *Mycobacterium tuberculosis* has plagued humans throughout history. (II) Improved public health brought the epidemic under control, and the advent of antibiotics in the 1940s seemed to ensure successful treatment. (III) But the bacteria have adapted to nearly every drug used against them. (IV) As a result, there has been a recent resurgence, and the disease now kills a person every 15 seconds, worldwide. (V) The germ in question is the tuberculosis-causing *Mycobacterium tuberculosis*, once the leading cause of death in the US.

A) I B) II C) III D) IV E) V

53. (I) The most commonly used illegal drug in the US is *marijuana*. (II) Its potential for serious health consequences is still debated, but few authorities regard it as a major health risk. (III) In fact, a recent study found no increased death rates for marijuana users, except for men who died of AIDS. (IV) Moreover, marijuana has been used medically to treat glaucoma and to prevent the vomiting and nausea associated with chemotherapy. (V) Although this study does not determine cause and effect, it seems safe to assume that marijuana did not cause death from AIDS, but rather that men receiving a diagnosis of AIDS may have subsequently increased their use of marijuana.

A) I B) II C) III D) IV E) V

54. (I) The causes of depression aren't fully understood. (II) A number of factors may make a person more likely to experience depression, such as a family tendency, side effects of certain medications, an introverted personality, and emotionally upsetting events. (III) For some reason, women are twice as likely as men to experience depression. (IV) Psychological studies show that changes in hormone levels before menstruation and after childbirth may be factors. (V) Hormones also control the volume of fluid and the levels of salt and sugar in the blood.

A) I B) II C) III D) IV E) V

55. (I) Like all medicines, sleep medicines have side effects. (II) On the other hand, daytime drowsiness can be best avoided by taking the lowest dose possible. (III) The most common of these effects are dizziness, lightheadedness, and difficulty with coordination. (IV) Sleep medicines can also make one sleepy during the day. (V) How drowsy one feels depends upon how one's body reacts to the medicine.

A) I B) II C) III D) IV E) V

56. (I) Doctors have noted a dramatic increase in bone fractures in children and teenagers in recent years. (II) Bones are rigid but not inflexible; they will bend in response to external forces. (III) For example, if you fall forward with your hands outstretched, the bones of your hands, wrists, and arms will flex to absorb the shock and then return to their original shape. (IV) However, as many of us know from personal experience, the skeletal system has its limits. (V) If a force is applied that exceeds a bone's resiliency, the result is a broken bone, or fracture.

A) I B) II C) III D) IV E) V

57. – 60. soruları aşağıdaki parçaya göre cevaplayınız.

Autism, from the Greek word for “self,” was first identified as a disorder in 1943. Initially, it was thought to be a psychological disorder brought on by cold or unemotional mothers, and curable by intensive sessions of psychotherapy. During the 1960s, specialists realized that autistics frequently had epilepsy and abnormal brain scans, which led to the condition being recognized as a brain disorder by the 1970s. Autism is now known to be a hereditary neurological condition, about three times more common in boys than girls. Usually, autistics lack the ability to relate normally to other people and have an anxious desire to maintain a routine, which evolves with age into intense interests or obsessions. Many autistic people deliver monologues on topics while unaware of other people’s comments or possible discomfort. There are several related, but different, forms of autism. Depending on the severity, symptoms can sometimes be alleviated with carefully controlled antidepressants, although sufferers typically find it difficult to function normally in society.

57. As is clear from the explanation given in the passage, ----.

- A) antidepressant drugs should not be used in order to reduce the severity of autism symptoms
- B) autism should not be regarded as a neurological disorder inherited from the family
- C) autism is not a single type of disorder with only one level of severity
- D) autism was a condition recognized by the ancient Greeks
- E) autistics can usually have a normal relationship with other people

58. It is pointed out in the passage that it has taken the medical world several decades to ----.

- A) decide to what extent psychotherapy can be used in the treatment of autism
- B) decide on which antidepressants are the best for the treatment of autism
- C) discover how the relationship between mothers and their children has an effect on autism
- D) establish clearly which methods are most efficient to alleviate the symptoms of autism
- E) understand clearly what autism is and the causes that lead to it

59. The point is made in the passage that what an autistic person normally does ----.

- A) can best be assessed through intensive sessions of psychotherapy
- B) is always tolerated, although it often draws other people’s attention
- C) is always ignored by other people, since it does not interest them at all
- D) in time develops into extreme fascinations or fixations
- E) is never taken into consideration in deciding the kind of treatment to be given

60. It is stated in the passage that autism ----.

- A) can always be successfully treated by means of psychotherapy
- B) is an abnormality which has not yet been researched adequately
- C) is far more widespread among male than female children
- D) usually has only one symptom, which reveals itself as epilepsy
- E) is a single kind of neurological abnormality, which can be treated most effectively through antidepressants

61. – 64. soruları aşağıdaki parçaya göre cevaplayınız.

Because oxygen is one of the major substances required for chemical reactions in the cells, it is fortunate that the body has a special control mechanism to maintain an almost exact and constant oxygen concentration in the extracellular fluid. This mechanism depends principally on the chemical characteristic of *haemoglobin*, which is present in all red blood cells. Haemoglobin combines with oxygen as blood passes through the lungs. Then, as the blood passes through the tissue capillaries, haemoglobin, because of its own strong chemical affinity for oxygen, does not release oxygen into the tissue fluid if too much oxygen is already there. If the oxygen concentration is too low, however, sufficient amounts are released to re-establish adequate tissue oxygen concentration. Thus, the regulation of oxygen concentration in the tissues depends principally on the chemical characteristics of haemoglobin itself.

61. The passage describes ----.

- A) the structural and chemical characteristics of the cells in the human body
- B) the process of the maintenance of an adequate level of oxygen in body tissues by haemoglobin
- C) the chemical reactions which take place in all the cells throughout the body
- D) the vital importance of the lungs in providing oxygen for the red blood cells
- E) why oxygen plays a basic role in the chemical reactions of the cells

62. It is stressed in the passage that haemoglobin ----.

- A) is responsible for an exact and constant maintenance of oxygen in the tissues
- B) is a special mechanism whereby the level of the extracellular fluid in the body is regulated
- C) has a chemical characteristic which helps the blood pass through the tissue capillaries
- D) continually releases small amounts of oxygen into the tissue fluid in the body
- E) circulates through the blood only when the oxygen concentration in the tissue fluid becomes too low

63. One understands from the passage that oxygen ----.

- A) in the extracellular fluid always increases when there is a chemical reaction
- B) in the tissues has to be reduced in order to prevent over-concentration
- C) and haemoglobin in the body do not always have a constructive relationship
- D) is a substance that sometimes plays an adverse role in the body's chemical reactions
- E) is necessary for the chemical reactions that take place in the cells

64. It is explained in the passage that, when the level of oxygen in the tissue fluid decreases, ----.

- A) a long time is required to get it back to normal
- B) the activity of the red blood cells increases immediately to carry more oxygen to the cells
- C) haemoglobin lets out enough oxygen to bring it back to normal
- D) the amount of oxygen provided through the lungs increases in a remarkable way
- E) this has an adverse effect on the chemical efficiency of haemoglobin

65. – 68. soruları aşağıdaki parçaya göre cevaplayınız.

The evidence linking dietary fat with cancer is less conclusive than for heart disease, but it does suggest an association between total fat intake and some types of cancer. Dietary fat seems not to initiate cancer development but to promote cancer once it has arisen. Some studies report a relationship between specific cancers and saturated fat or dietary fat from animal sources, which is mostly saturated. Thus, health advice to reduce the risk of heart disease: reduce total fat intake, especially saturated fat. The relationship between dietary fat and the risk of cancer differs for various types of cancers. In the case of breast cancer, some studies indicate little or no association between dietary fat and cancer. Others find that total energy intake is a better predictor than the percentage of kcalories from fat. In the case of prostate cancer, there does appear to be a strong association with fat. This association appears to be due primarily to saturated fat from meats; fat from milk or fish has not been implicated in cancer risk.

65. It is clear from the passage that, according to some studies, saturated fat ----.

- A) and its effect on a number of diseases, including heart disease, has yet to be further researched
- B) plays a primary role in the development of all kinds of cancer rather than in heart disease
- C) should only be consumed moderately so as to prevent all kinds of cancers
- D) does seem to have a link with certain types of cancer, of which prostate cancer is an example
- E) has only recently come to be regarded, in the light of extensive research, as a major cause of cancer

66. A point is made in the passage that the medical advice given for the reduction of the risk of cancer ----.

- A) is the same as the medical advice given for the reduction of the risk of heart disease
- B) does not depend on any kind of conclusive evidence and, hence, can be ignored
- C) is only partially sound, since the cancer studies undertaken so far have not reached a convincing conclusion
- D) not only concerns the intake of saturated fat but is also related to the state of the individual's health
- E) has been challenged by some specialists on the grounds that the causes of cancer have not been established fully

67. As one learns from the passage, some suggest that, in assessing the risk of breast cancer, one should ----.

- A) also pay attention to the question of whether kcalorie intake affects the risk of heart disease
- B) focus primarily on the type of cancer and ignore the role of saturated fat
- C) take into consideration total energy intake rather than the levels of kcalories from fat
- D) closely study the variations observed in the percentages of kcalories from saturated fat
- E) be concerned not only with total energy intake but also with the percentages of kcalories from fat

68. It is suggested in the passage that every cancer ----.

- A) seems to develop as a result of the harmful effects of dietary fat
- B) is of a different kind and cannot necessarily be associated with dietary fat
- C) can be predicted through kcalorie percentages related to dietary fat
- D) is in some way associated with heart disease
- E) is just as fatal as breast or prostate cancer

69. – 72. soruları aşağıdaki parçaya göre cevaplayınız.

People who fail to eat enough food to meet energy needs risk nutrient deficiencies, including thiamin deficiency. Inadequate thiamin intakes have been reported among malnourished and homeless people. Similarly, people who derive most of their energy from empty-kcalorie items, like alcohol, risk thiamin deficiency. Alcohol contributes energy, but provides few, if any, nutrients and often displaces food. In addition, alcohol enhances thiamin excretion in the urine, doubling the risk of deficiency. Prolonged thiamin deficiency can result in the disease "beriberi," which was first observed in East Asia when the custom of polishing rice became widespread. Rice provided 80 per cent of the energy intake of the people of that area, and rice hulls (the outer skin of rice) were their principal source of thiamin. When the hulls were removed, beriberi spread like wildfire. Because thiamin participates in nerve processes, paralysis sets in when it is lacking. The symptoms of beriberi include damage to the nervous system as well as to the heart and other muscles.

69. According to the passage, thiamin deficiency ----.

- A) has been attributed mainly to excessive consumption of alcohol
- B) has always been very common among East Asian people
- C) and its effects were understood, to some extent, after the case of the East Asian people
- D) affects the nervous system and can lead to paralysis
- E) has been observed mostly among the homeless people of East Asia

70. As is clear from the passage, undernourished people ----.

- A) usually suffer from a number of diseases which are linked to prolonged thiamin deficiency
- B) are likely to contract various diseases, in particular, beriberi
- C) are particularly vulnerable to thiamin deficiency and frequently suffer from heart disease
- D) must avoid alcohol and keep to a diet which is rich in thiamin
- E) may face nutrient deficiencies since they do not have enough energy intake

71. In the passage, it is pointed out that alcohol ----.

- A) has a positive effect on nutrients in food and, thus, increases one's intake of energy
- B) is a major source of all kinds of nutrients, especially of thiamin
- C) is an empty-kcalorie beverage and increases the urinary excretion of thiamin
- D) plays a positive role in overcoming one's nutrient deficiencies
- E) provides a great deal of energy whereby inadequate thiamin intake is tolerated

72. As one can understand from the passage, people in East Asia began to contract beriberi ----.

- A) due to excessive alcohol consumption
- B) when the hulls were removed from their rice
- C) due to damaged nerve processes caused by excess thiamin
- D) only because rice was excluded from their regular daily diet
- E) even though the food they took in contained all the nutrients needed

73. – 76. soruları aşağıdaki parçaya göre cevaplayınız.

The single most effective step people can take against hypertension is to find out whether they have it. At check-up time, a health-care professional can provide an accurate resting blood pressure reading. Under normal conditions, blood pressure fluctuates continuously in response to a variety of factors including such things as talking or shifting position. Some people react emotionally to the procedure, which raises the blood pressure reading. For these reasons, if the resting blood pressure is above normal, the reading should be repeated before confirming the diagnosis of hypertension. Thereafter, the blood pressure should be checked regularly. In general, efforts to reduce high blood pressure focus on weight control, because excess body fat, especially abdominal fat, can precipitate hypertension. Indeed, weight loss alone is one of the most effective nondrug treatments for hypertension. Those who are using drugs to control their blood pressure can often reduce or discontinue the drugs if they lose weight. Even a modest loss of 5 kilograms may significantly lower blood pressure.

73. According to the passage, weight loss ----.

- A) is certainly one way of overcoming hypertension effectively
- B) can be a very exhausting and boring process for some people
- C) can most effectively be achieved through the use of certain drugs
- D) is by itself not effective enough to reduce high blood pressure
- E) should be taken into consideration only when drug treatment for hypertension has failed

74. It is clear from the passage that, before diagnosing hypertension, the health-care professional ----.

- A) must make sure that the patient has no emotional problems
- B) should advise the patient on the most effective methods of losing weight
- C) ought to recommend to the patient certain drugs that are effective for weight loss
- D) should repeat the blood pressure test if the first reading is above normal
- E) must first deal with excess body fat and bring the blood pressure under control

75. It is pointed out in the passage that, normally, blood pressure ----.

- A) should not be regarded as a means to find out about hypertension
- B) has an irregular pattern in those people who have too much abdominal fat
- C) fluctuates widely among people who cannot control their emotions
- D) can be controlled and regulated through repeated readings
- E) is not stable, but constantly changes due to various reasons

76. According to the passage, if a person with hypertension loses weight, ----.

- A) other nondrug treatments should be disregarded
- B) regular blood pressure readings may be discontinued
- C) every attempt should be made to read the blood pressure accurately
- D) it may be possible to decrease the dosage of hypertension medication
- E) effective drugs should be used to reduce abdominal fat in the first place

77. – 80. soruları aşağıdaki parçaya göre cevaplayınız.

Oral cancers develop in 30,000 Americans and cause 8,000 deaths each year, mostly in people over age 40. This represents about 2.5 per cent of cancer cases and 1.5 per cent of all cancer-related deaths. Clearly this is a high rate considering the small size of the mouth in relation to the rest of the body. Along with cancers of the lung and skin, cancers of the mouth are more preventable than most other cancers. Non-cancerous and cancerous growths can originate in any type of tissue in and around the mouth, including bone, muscle, and nerve. Rarely, cancers found in the mouth region have spread there from other parts of the body – most commonly the lung, breast and prostate. Screening for oral cancer should be an integral part of medical and dental examinations because early detection is critical. Cancers less than a half inch across can usually be cured easily. Unfortunately, most oral cancers aren't diagnosed until they've spread to the lymph nodes of the jaw and neck. Because of delayed detection, 25 per cent of oral cancers are fatal.

77. It is made clear in the passage that oral cancers ----.

- A) account for 1.5 per cent of deaths from cancer in Americans
- B) are always cured effectively, since they are detected right away
- C) are more fatal than other cancers, such as breast and prostate cancers
- D) have only in the past few years become a major concern among dentists in the US
- E) are invariably caused by cancers in the rest of the body

78. One understands from the passage that medical examinations ----.

- A) should be carried out once dental examinations confirm a non-cancerous growth in the mouth
- B) must always precede dental examination to detect cancerous growths in the mouth
- C) should include a check for the early detection of oral cancers
- D) must be made of all the body before the treatment of an oral cancer can be initiated
- E) should focus on cancerous rather than non-cancerous growths in various parts of the body

79. It is emphasized in the passage that the delay in the diagnosis of most cancers in the mouth ----.

- A) can have a harmful effect on other parts of the body, especially on the lungs
- B) can lead to the spread of these cancers to the jaw and neck areas
- C) should not be tolerated, since these cancers can spread to the breast and prostate
- D) is a primary cause of death among middle-aged people
- E) is not as serious as a delay in detecting skin cancers

80. In this passage, the writer ----.

- A) is concerned with oral cancers in regard to their nature, early detection, and effects as well as their incidence rate in America
- B) explains in detail the importance of oral hygiene and how cancerous growths in the mouth can be prevented
- C) gives a wide range of reasons for widespread cases of lung cancer in America
- D) gives a full description of how oral cancers spread to many parts of the body, including the lymph nodes of the jaw and neck
- E) suggests that cancerous and non-cancerous growths in the mouth can only be differentiated through a full medical and dental examination
